NCL Fall 2024 Team Game Scouting Report

Dear Yamini Mandadi (Team "Yamini"),

Thank you for participating in the National Cyber League (NCL) Fall 2024 Season! Our goal is to prepare the next generation of cybersecurity professionals, and your participation is helping achieve that goal.

The NCL was founded in May 2011 to provide an ongoing virtual training ground for collegiate students to develop, practice, and validate their cybersecurity skills in preparation for further learning, industry certifications, and career readiness. The NCL scenario-based challenges were designed around performance-based exam objectives of CompTIA certifications and are aligned to the National Initiative for Cybersecurity Education (NICE) Cybersecurity Workforce Framework published by the National Institute of Standards and Technology (NIST).

As you look to a future career in cybersecurity, we hope you find this report to be valuable in both validating skills and identifying areas for improvement across the nine NCL skills categories. You can use this NCL Scouting Report to:

- Validate your skills to employers in any job application or professional portfolio;
- Show case your achievements and strengths by including the Score Card view of your performance as part of your résumé or simply sharing the validation link so that others may view the detailed version of this report.

The NCL Fall 2024 Season had 9,260 students/players and 573 faculty/coaches from more than 540 two- and four-year schools & 230 high schools across all 50 U.S. states registered to play. The Individual Game Capture the Flag (CTF) event took place from October 25 through October 27. The Team Game CTF event took place from November 8 through November 10. The games were conducted in real-time for students across the country.

NCL is powered by Cyber Skyline's cloud-based skills evaluation platform. Cyber Skyline hosted the scenario-driven cybersecurity challenges for players to compete and track their progress in real-time.

To validate this report, please access: cyberskyline.com/report/3Y3918EGDGBA

Congratulations for your participation in the NCL Fall 2024 Team Game! We hope you will continue to develop your knowledge and skills and make meaningful contributions as part of the Information Security workforce!

Dr. David Zeichick
NCL Commissioner

NCL Fall 2024 Team Game

The NCL Team Game is designed for student players nationwide to compete in realtime in the categories listed below. The Team Game promotes camaraderie and evaluates the collective technical cybersecurity skills of the team members.

574 TH PLACE OUT OF 4893
NATIONAL RANK

1065 POINTS OUT OF 3100
PERFORMANCE SCORE

89th National Percentile

Average: 1153.1 Points

Average: 63.2%

Average: 44.6%

Cryptography

20 POINTS OUT OF 310

40.0% ACCURACY

COMPLETION: 18.2%

Identify techniques used to encrypt or obfuscate messages and leverage tools to extract the plaintext.

Enumeration & Exploitation

10 POINTS OUT OF 300

100.0% ACCURACY

COMPLETION: 11.1%

Identify actionable exploits and vulnerabilities and use them to bypass the security measures in code and compiled binaries.

Forensics

100 POINTS OUT OF 400

45.5% ACCURACY

COMPLETION: 45.5%

Utilize the proper tools and techniques to analyze, process, recover, and/or investigate digital evidence in a computer-related incident.

Log Analysis

330 POINTS OUT OF 350

62.1% ACCURACY

COMPLETION: 94.7%

Utilize the proper tools and techniques to establish a baseline for normal operation and identify malicious activities using log files from various services.

Network Traffic Analysis

100 POINTS OUT OF 300

46.2% ACCURACY

COMPLETION: 66.7%

Identify malicious and benign network traffic to demonstrate an understanding of potential security breaches.

Open Source Intelligence

305 POINTS OUT OF 390

46.4% ACCURACY

COMPLETION: 61.9%

Utilize publicly available information such as search engines, public repositories, social media, and more to gain in-depth knowledge on a topic or target.

Password Cracking

15 POINTS OUT OF 340

75.0% ACCURACY

COMPLETION: 10.7%

Identify types of password hashes and apply various techniques to efficiently determine plaintext passwords.

Scanning & Reconnaissance

185 POINTS OUT OF 310

46.7% ACCURACY

COMPLETION: 70.0%

Identify and use the proper tools to gain intelligence about a target including its services and potential vulnerabilities.

Web Application Exploitation

0 POINTS OUT OF 300

0.0% ACCURACY

COMPLETION: 0.0%

Identify actionable exploits and vulnerabilities and use them to bypass the security measures in online services.

Note: Survey module (100 points) was excluded from this report.

Yamini Mandadi
ymandad@calstatela.edu

Cryptography Module

Identify techniques used to encrypt or obfuscate messages and leverage tools to extract the plaintext.

Average: 47.1%

Bases (Easy)

20 POINTS OUT OF 45

50.0% ACCURACY

COMPLETION: 50.0%

Decode messages that have been encoded one or more times using different number bases.

Shady Shapes (Easy)

0 POINTS OUT OF 50

0.0% ACCURACY

COMPLETION: 0.0%

Decode a morse code message encoded using shapes for dots and dashes.

Jefferson (Easy)

0 POINTS OUT OF 60

0.0% ACCURACY

COMPLETION: 0.0%

Find and use the correct Jefferson cipher wheel to decode a message.

Secure Flag Share (Medium)

0 POINTS OUT OF 80

0.0% ACCURACY

COMPLETION: 0.0%

Perform a known plaintext attack on an XOR-encrypted message.

Scheming (Hard)

0 POINTS OUT OF 75

0.0% ACCURACY

COMPLETION: 0.0%

Perform a known plaintext attack on a homophonic cipher.

Yamini Mandadi
ymandad@calstatela.edu

Enumeration & Exploitation Module

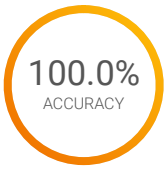

Identify actionable exploits and vulnerabilities and use them to bypass the security measures in code and compiled binaries.

Hashing (Easy)

15 POINTS OUT OF 15 | 75.0% ACCURACY | COMPLETION: 100.0%

Generate password hashes for MD4, Whirlpool, and SHA512.

Common Passwords (Easy)

0 POINTS OUT OF 30 | 0.0% ACCURACY | COMPLETION: 0.0%

Crack MD5 password hashes for common passwords .

Windows (Easy)

0 POINTS OUT OF 30 | 0.0% ACCURACY | COMPLETION: 0.0%

Crack Windows NTLM password hashes that may not be found in common rainbow tables.

Combination (Medium)

0 POINTS OUT OF 45 | 0.0% ACCURACY | COMPLETION: 0.0%

Build a wordlist or pattern config to crack password hashes of a known pattern.

PDF (Medium)

0 POINTS OUT OF 50 | 0.0% ACCURACY | COMPLETION: 0.0%

Crack the insecure password for a protected PDF file.

Wordlist (Hard)

0 POINTS OUT OF 65 | 0.0% ACCURACY | COMPLETION: 0.0%

Build a wordlist to crack passwords not found in common wordlists.

Prog Rock (Hard)

0 POINTS OUT OF 105 | 0.0% ACCURACY | COMPLETION: 0.0%

Create a custom wordlist to crack passwords by creating permutations based on password complexity requirements.

Yamini Mandadi
ymandad@calstatela.edu
