EDUCATION

California State University, Los Angeles
Master of Science in Computer Science

Reva University
Bachelor of Technology in Computer Science and Engineering

SUMMARY

Backend and Cloud Engineer with 3+ years of experience in cloud infrastructure, automation, and secure system design, complemented by hands-on experience with Web APIs and developing RESTful APIs and database-driven applications using Python, Node.js, and MongoDB. Experienced in infrastructure as code, CI/CD, monitoring, troubleshooting, and building reliable cloud solutions, with a focus on scalability, security, and operational efficiency. Microsoft Azure Security Hackathon Winner and National Cyber League participant ranking in the 89th percentile, seeking to contribute to core infrastructure engineering by building resilient backend services and scalable platforms for AI-driven applications.

EXPERIENCE

Cloud Platform Engineer | *Community Dreams Foundation* Aug 2026-Present

- Configured and supported Self-hosted Integration Runtime (SHIR) to securely connect Azure Data Factory with on-premises/private-network data sources, troubleshooting connectivity, authentication, and pipeline execution issues.
- Implemented Azure Logic Apps and Event Hubs for event-driven workflows, system integrations, and event ingestion, automating operational processes while monitoring pipeline health and troubleshooting streaming and ingestion issues.
- Supported Azure Container Instances and containerized workloads, assisting with deployment, configuration, networking, monitoring, and troubleshooting of container-based applications in Azure.

System Engineer | *Tata Consultancy Services* July 2023-Sep 2024

- Developed modular Terraform configurations for Azure environments with remote state and environment-specific configurations for Dev, QA, and Production, enabling consistent and repeatable infrastructure deployments.
- Built and maintained DevSecOps CI/CD pipelines using Jenkins, Terraform, Azure CLI, and Git, integrating secret scanning, Checkov IaC security checks, Terraform validate/plan, and approval gates to enforce automated quality and security controls before production deployments.
- Implemented secure Azure connectivity using Private Endpoints and Private DNS, enabling private access to Azure PaaS services while reducing public network exposure.
- Administered Azure SQL workloads, including SQL Server backup/restore, backup validation, long-term retention, and disaster recovery planning aligned with RPO/RTO requirements.
- Designed and implemented Azure network security architecture using hub-and-spoke VNets, subnet segmentation, VNet peering, UDRs, Azure Firewall, NSGs, Application Gateway, and Load Balancer to support secure and resilient application connectivity.
- Monitored Azure environments using Azure Monitor, Log Analytics, Application Insights, Prometheus, and Grafana, creating alerts and dashboards and supporting troubleshooting and root-cause analysis.
- Integrated Jira with Bitbucket to link development tickets with source-control workflows, enabling traceability between Jira issues, Git branches, pull requests, code reviews, and deployment activities across application and DevOps teams.

Assistant System Engineer | *Tata Consultancy Services* July 2022 - July 2023

- Reduced Azure infrastructure costs by approximately 50–66% through Azure Cost Management, resource rightsizing, App Service Plan optimization, and rehosting strategies.
- Supported migration of application workloads from Azure App Service Plan to the Consumption Plan to reduce cloud costs, performing proof-of-concept testing and validating application compatibility, scalability, networking, security, and deployment requirements.
- Supported Azure networking operations across VNets, subnets, NSGs, Azure Firewall, peering, and routing, troubleshooting connectivity and security issues for application workloads.
- Implemented Zero Trust security controls using Microsoft Entra ID, App registrations, Conditional Access, MFA, PIM, RBAC, Managed Identities, and Service Principals to enforce least-privilege access.
- Managed Azure Key Vault and SSL/TLS certificate lifecycle, supporting secure storage and access to application secrets and certificates.
- Supported Azure security posture and governance using Microsoft Defender for Cloud, Azure Policy, NSGs, firewall controls, and storage network restrictions.

Assistant System Engineer Trainee | *Tata Consultancy Services* July 2021 - July 2022

- Automated standardized Azure infrastructure deployments using ARM Templates, establishing repeatable infrastructure deployment patterns.
- Provisioned and managed Azure Virtual Machines using Terraform and Azure CLI, standardizing compute infrastructure across development and production environments.
- Administered Active Directory, DNS, Microsoft Entra ID, and AWS IAM, supporting identity, authentication, authorization, and hybrid/multi-cloud environments.
- Implemented security controls including RBAC, Conditional Access, MFA, NSGs, firewall rules, Azure Policy, and Storage Account network restrictions.
- Managed ITIL-based incidents, service requests, changes, SLA requirements, and root-cause analysis, supporting reliable production operations.

NATIONAL CYBER LEAGUE (NCL) — CYBERSECURITY COMPETITION
Fall 2024 | Team & Individual Games

- Participated in hands-on Capture the Flag (CTF) cybersecurity challenges covering Open Source Intelligence (OSINT), network scanning and reconnaissance, network traffic analysis, log analysis, enumeration and exploitation, digital forensics.
- Performed network reconnaissance and vulnerability identification using Nmap, analyzed network traffic with Wireshark, and investigated security events through log analysis and forensic techniques.
- Applied penetration-testing and exploitation techniques in controlled environments to identify and validate security vulnerabilities using tools such as Metasploit and Nessus.
- Conducted OSINT investigations using publicly available information, including DNS/domain reconnaissance, image analysis, geolocation, metadata, and public-source research.
- Team Game: Ranked 574th out of 4,893 nationally (89th percentile), with 93rd percentile in Log Analysis, 91st percentile in Scanning & Reconnaissance, and 90th percentile in OSINT.
- Individual Game: Ranked 1,392nd out of 8,484 nationally (84th percentile), with 94th percentile in Network Traffic Analysis, 88th percentile in Log Analysis, and 85th percentile in Enumeration & Exploitation.

CERTIFICATION(s) / ACHIEVEMENT(s)

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Security Engineer Associate (AZ-500)
- Microsoft Certified: Azure Fundamentals (AZ-900)
- Azure Security Hackathon Winner
- National Cyber League

RELEVANT PROJECT

Network Scanning & Exploitation ***github.com/NetworkScanning***

- Conducted manual and automated network security assessments using Nmap, Nessus, Wireshark, and Metasploit to identify exposed services, vulnerabilities, and insecure network configurations.
- Performed TCP/UDP port scanning, service enumeration, OS fingerprinting, vulnerability validation, and controlled penetration testing across test environments.
- Analyzed findings using CVSS-based risk categorization, documented security risks, and developed remediation recommendations.
- Produced structured security assessment reports covering vulnerabilities, impact, evidence, risk, and mitigation.

Retrieval-Augmented-Generation-with-Llama-3-and-Vector-Search ***github.com/Llama-3-and-Vector-Search***

- Developed a Retrieval-Augmented Generation (RAG) application using Llama 3.2, LangChain, and ChromaDB to enable semantic document retrieval and context-aware answer generation through an interactive Gradio interface.
- Containerized the application using Docker Compose and automated build and delivery workflows with GitHub Actions, publishing container images to Amazon ECR to support repeatable deployments.

Fine-Tuned Text Classification Model ***github.com/Finetuning_Model***

- Developed a text-classification model to categorize online community posts by content and intent, enabling more efficient content discovery and identification of recurring discussion topics
- Trained and evaluated a fine-tuned model against a baseline using labeled datasets, comparing classification performance to assess improvements in predictive quality.

Log Analysis with Elastic Search ***github.com/LogAnalysis-ElasticSearch***

- Developed a JavaScript/Node.js log analysis application with Elasticsearch integration for scalable ingestion, indexing, and real-time analytics of system logs.
- Designed and implemented RESTful API endpoints (Node.js/Express) to query, filter, and manage log data, enabling programmatic access and integration with monitoring dashboards.

RESTful Music Playlist API ***github.com/BackendRestAPI***

- Developed a RESTful backend API with Node.js, Express.js, MongoDB, and Mongoose to support user authentication, track search, and playlist-related functionality using modular route, model, and middleware architecture.
- Integrated external music data from the Last.fm API and implemented secure user registration/login with bcrypt password hashing and JWT-based authorization for protected routes.

TECHNICAL SKILLS

Cloud & Azure: Azure, AWS, Vmware,VNets, Private DNS
Azure Security & Identity: Azure Firewall, NSGs, Microsoft Defender for Cloud, Key Vault, Microsoft Entra ID, RBAC, Managed Identities, Service Principals, Conditional Access, MFA, PIM, Zero Trust, SSL/TLS
Infrastructure & DevOps: Terraform, ARM Templates, Jenkins, Bitbucket, GitHub Actions, Azure CLI, PowerShell, Packer, Git, Docker, Kubernetes
Security Assessment: Nmap, Nessus, Metasploit, Snort(IDS/IPS),Wireshark, Vulnerability Assessment, Network Security Testing
Monitoring & Observability: Azure Monitor, Log Analytics, Application Insights, Prometheus, Grafana, Alert manager
Programming & Databases: Python, C++, C, JavaScript, React, Node.js, REST APIs, MySQL, MongoDB, Elasticsearch
Microsoft Suite and AI tools: Microsoft 365, Visio, Excel, Word, PowerPoint, Teams, Claude Code
